

Draper Projector Lifts

Revelation

The DRAPER REVELATION permanently conceals the projector—and its noise—above the ceiling at all times. You won't see or hear the projector—not before, during or after the show. You'll only see a hinged door in the ceiling, finished in white.

The REVELATION's dual first surface mirror system (to mm thick) optical grade glass mirrors are 94% reflective for optimum flatness and reflectivity. Combine the REVELATION with a ceiling-recessed DRAPER projection screen and take your projection showmanship to a new level. Available in two models.

Orbiter

The ORBITER's ingenious design allows it to fit in small ceiling cavities, and it is the only lift that can be installed in an angled ceiling or wall, making it uniquely versatile.

The lift conceals your projector above the ceiling and quickly and quietly rotates it into the "show" position at the touch of a switch or wireless transmitter. The ORBITER is supplied with a universal-style bracket that allows for easy attachment of a variety of projector models. The ORBITER can be used for video conferencing cameras, speakers, etc.

Scissor Lift

DRAPER'S SCISSOR LIFT SL and SCISSOR LIFT SLX not only conceal your projector above the ceiling and set it exactly where you need it at presentation time, they also bring it down to within easy reach for service. This projector lift offers three positions: store, show and service.

Travel distance available from 4' to 17'. Scissors on the left, right and back sides of the unit stabilize the projector from any sway both laterally and front-to-back. Projectors can be bolted directly to the lift's bottom pan, or mounted with the optional SMS LOW PROFILE MOUNT.

Phantom

The new and unique PHANTOM quickly and quietly dips the projector out of the ceiling and into the "show" position at the touch of a switch or wireless transmitter. The projector is mounted into a framework above the ceiling. When activated, a trapdoor lowers the projector into your room using a precision actuator with pre-set limits.

The projector is easily aligned during installation to provide a direct light path onto your DRAPER projection screen. The PHANTOM is supplied with a universal-style bracket that allows for easy attachment of a variety of projector models.

Two PHANTOM models to choose from that fit almost any size projector. The PHANTOM can be used for videoconferencing cameras, speakers, etc.

Micro Projector Lift (MPL)

The MICRO PROJECTOR LIFT (MPL) is small and convenient, just like the projectors it is designed to accommodate. Weighing only 35 pounds, it can be installed in an existing 2' x 2' ceiling opening without disturbing the ceiling framework.

The projector's "show" position can be set at any point with infinite adjustability, up to 48" extension. The MICRO PROJECTOR LIFT utilizes the same exclusive 3-scissor design as DRAPER's original SCISSOR LIFT but features a compact side-folding scissor. The load is lifted by two 1" wide Kevlar® straps. Safety belt provides extra protection.

Closed height of lifting unit is only 5" tall (not including projector, projector bracket or closure), so a minimal amount of overhead ceiling space is required. The MICRO PROJECTOR LIFT is designed for today's smaller projectors.

LCD Lift

The LCD PROJECTOR LIFT contains an innovative current sensor that delays closing of the unit until the projector fan has shut off. It has a lifting capacity of 65 lbs. Two models.

AeroLift 25, 50 & 150

Winner of the 2005 ADEX Platinum Award by *Design Journal*, a magazine which serves the interior design market. The AEROLIFT 25 was "recognized by the judges for its superior product design and quality." The platinum award is the top level of recognition.

All three models are powered by strong tubular motors for a simplified design and feature a stabilizing arm which can be used for cable management. Built-in adjustability allows you to deal with job site conditions quickly and easily, like slightly out of square or irregularly spaced joists.

The projector can be mounted flush to bottom pan, or with an SMS LOW PROFILE MOUNT. It can also be used to recess speakers, security and videoconferencing cameras or document cameras.
